TITANIC EDA REPORT - PAGE 1

DATASET OVERVIEW

Dataset: Titanic

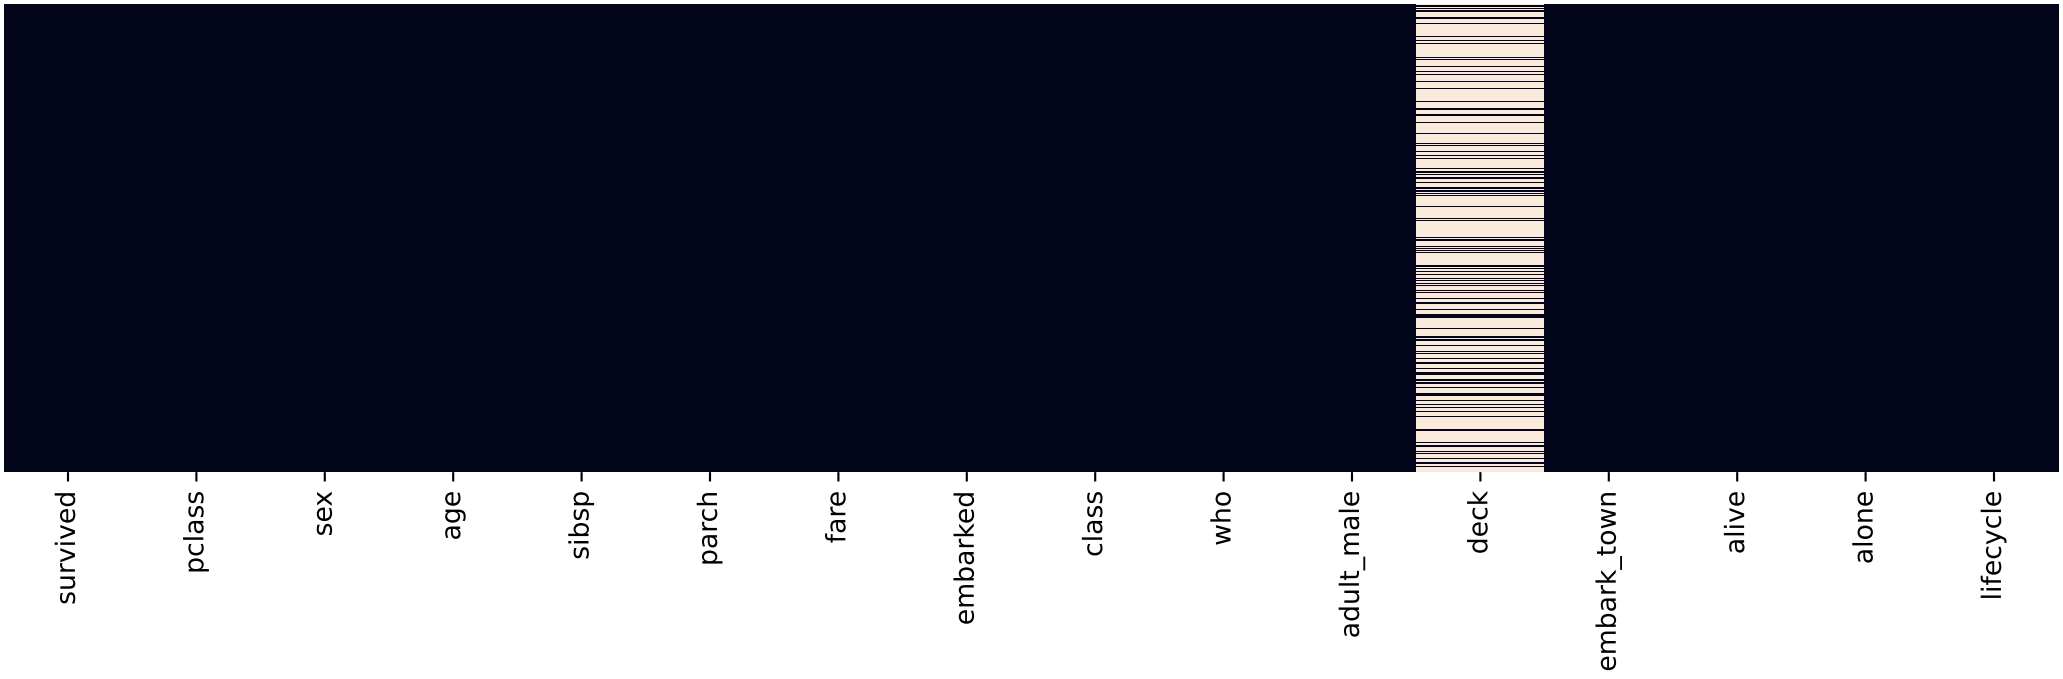

Rows: 784
Columns: 16

Target Variable: survived

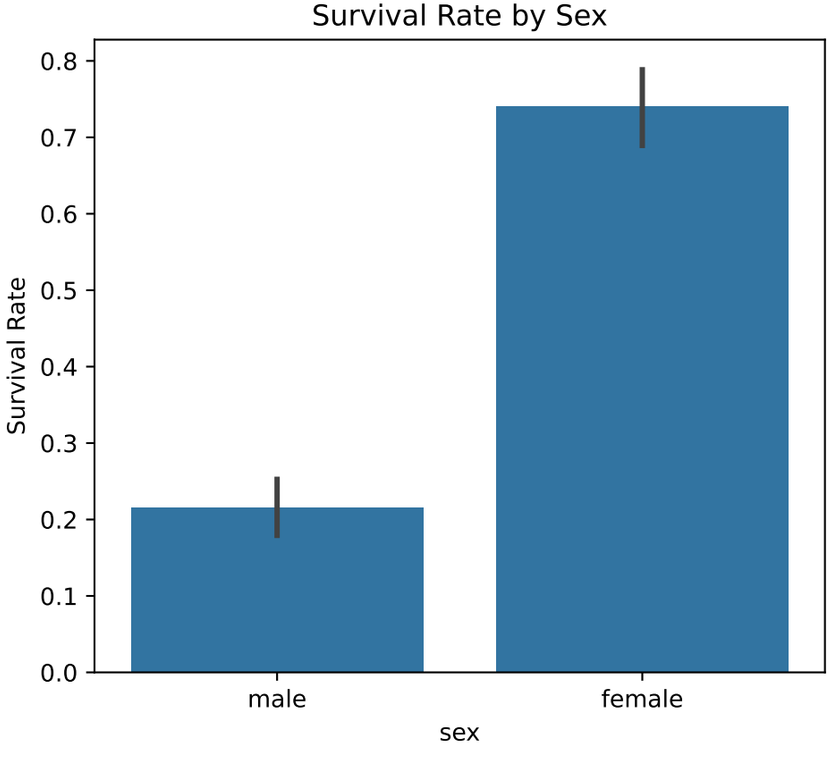

0 = Did not survive
1 = Survived

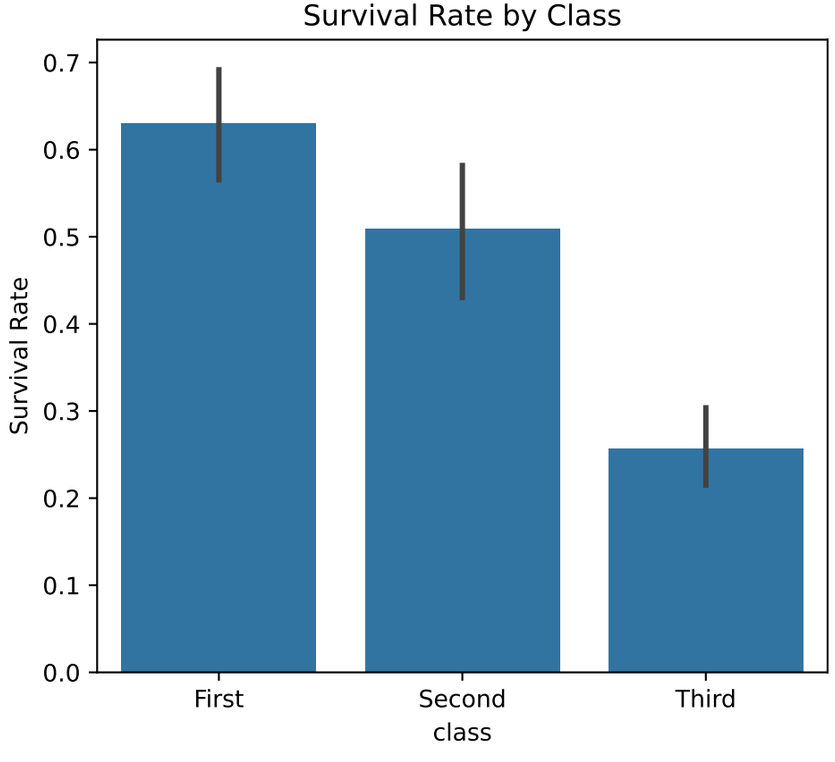

EDA Analysis:
• Missing values
• Survival by sex
• Survival by class
• Survival by age
• Lifecycle mapping
• Correlation analysis

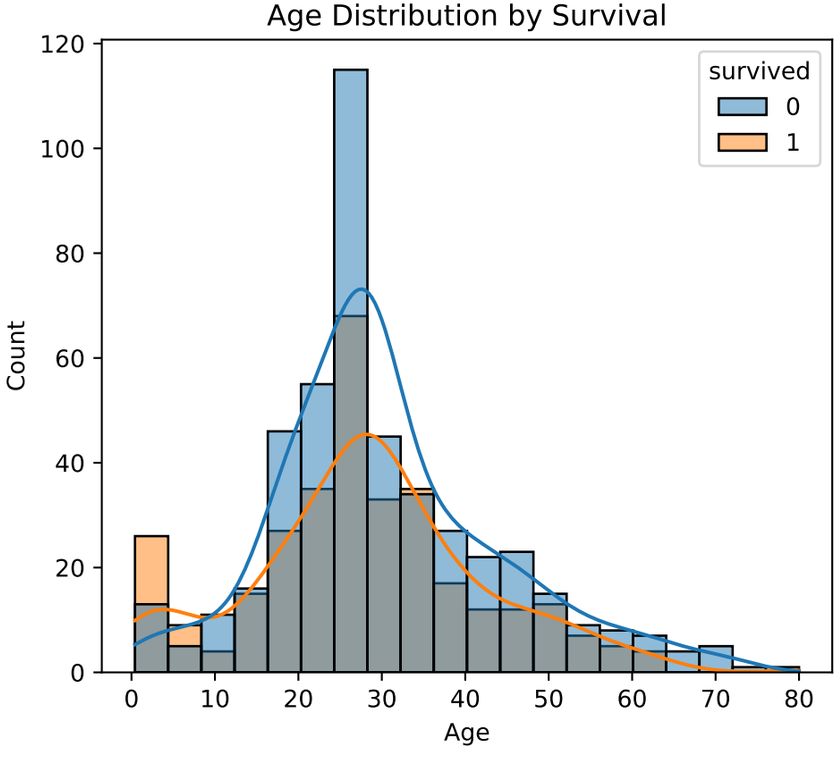

Missing-Value Heatmap

TITANIC EDA REPORT - PAGE 4

EDA CONCLUSIONS

1. Female passengers had a higher survival rate than male passengers.

2. First-class passengers generally had a higher survival rate.

3. Age showed a relationship with passenger survival.

4. Fare and passenger class showed relationships with survival.

5. Lifecycle mapping helps compare survival across age groups.

6. Missing values were identified and cleaned before analysis.

7. Correlation analysis helps identify relationships between numerical variables.
